**Magnetic Morse Keyer**

25X1A5a1

1. A requirement for a Magnetic Morse Coder was cancelled by Research Development and Production Review Board Action on 14 January 1958. [REDACTED] was so advised, however, the contractor elected to submit a proposal for equipment development with the request that the proposal be retained in our files for possible future consideration.

2. The proposal has been reviewed and filed. The proposal is outstanding in that it presents a practical means for placing Morse code on magnetic tape by single letter selection rather than by dot and dash selection.

3. Inasmuch as the AS-3 [REDACTED] system is designed to provide a minimum training requirement for the operator, it should be noted that further equipment sophistication is possible by the replacement of the dot/dash coder in the AS-3 with a PAMM type letter selection coder. 25X1A
